

Life Science Lab Notebook Entry #2

Measurement

Purpose/Background: Throughout history, humans have engineered amazing structures and completed incredible feats without the use of modern technology. Discoveries of “new” ancient feats are made every year (such as the ancient aqueduct system discovered in Jerusalem or the huge subterranean cities discovered in Turkey). These discoveries are evidence of the importance of measurement in the past, but what about the present and future?

Instructions: Copy and answer the following question in your lab notebook:

“How is daily life influenced by measurement?”
